buildDatabase	<i>buildDatabase</i>
---------------	----------------------

Description

Constructs a subset of the cell types and cytometries in optimalFlowData in order to be used as a database.

Usage

```
buildDatabase(dataset_names, population_ids)
```

Arguments

dataset_names A vector of strings with the names of the cytometries, ranging in c("Cytometry1",..., "Cytometry40").

population_ids A vector of strings with the names of the cell types to be selected in each cytometry.

Value

A list where each element is a cytometry containing only the cell types given by population_ids.

Examples

```
database <- buildDatabase(  
  dataset_names = paste0('Cytometry', c(2:5, 7:9, 12:17, 19, 21)),  
  population_ids = c('Monocytes', 'CD4+CD8-', 'Mature SIg Kappa', 'TCRgd-'))
```

cytometry.diagnosis	<i>cytometry.diagnosis</i>
