

# Package ‘optimalFlowData’

June 6, 2023

**Type** Package

**Title** optimalFlowData

**Version** 1.13.0

**Author** Hristo Inouzhe <hristo.inouzhe@gmail.com>

**Maintainer** Hristo Inouzhe <hristo.inouzhe@gmail.com>

**Description**

Data files used as examples and for testing of the software provided in the optimalFlow package.

**License** Artistic-2.0

**Encoding** UTF-8

**LazyData** true

**Depends** R (>= 4.0)

**Suggests** knitr, BiocStyle, rmarkdown, magick

**VignetteBuilder** knitr

**biocViews** ExperimentData, PackageTypeData, ImmunoOncologyData,  
FlowCytometryData

**RoxygenNote** 7.1.0

**git\_url** <https://git.bioconductor.org/packages/optimalFlowData>

**git\_branch** devel

**git\_last\_commit** fc5c5fc

**git\_last\_commit\_date** 2023-04-25

**Date/Publication** 2023-06-06

 buildDatabase

*buildDatabase*

---

## Description

Constructs a subset of the cell types and cytometries in optimalFlowData in order to be used as a database.

**Usage**

```
buildDatabase(dataset_names, population_ids)
```

**Arguments**

**dataset\_names** A vector of strings with the names of the cytometries, ranging in c("Cytometry1", ..., "Cytometry40").

**population\_ids** A vector of strings with the names of the cell types to be selected in each cytometry.

**Value**

A list where each element is a cytometry containing only the cell types given by `population_ids`.

**Examples**

```
database <- buildDatabase(
  dataset_names = paste0('Cytometry', c(2:5, 7:9, 12:17, 19, 21)),
  population_ids = c('Monocytes', 'CD4+CD8-', 'Mature SIg Kappa', 'TCRgd-'))
```

---

|                     |                            |
|---------------------|----------------------------|
| cytometry.diagnosis | <i>cytometry.diagnosis</i> |
|---------------------|----------------------------|

---

**Description**

A list of abbreviations corresponding to the diagnosis for each cytometry in `optimalFlowData`. Diagnosis abbreviations correspond to: Healthy Diagnosis, Mantle Cell Lymphoma, Follicular Lymphoma, Lymphoplasmacytic Lymphoma, Chronic Lymphocytic Leukemia, Diffuse Large B-Cell Lymphoma and Hairy Cell Leukemia.

**Usage**

```
data("cytometry_diagnosis")
```

**Format**

A list of 40 diagnosis.

**Examples**

```
data(cytometry.diagnosis)
print(cytometry.diagnosis)
```

---

Cytometry1

*Cytometry1*

---

### Description

A simulated flow cytometry dataset, as a data frame, of a healthy individual based on data taken following Euroflow protocols.

### Usage

```
data("Cytometry1")
```

### Format

A data frame with 82810 observations on the following 11 variables.

CD19/TCRgd:PE Cy7-A LOGICAL an integer vector.

CD38:APC H7-A LOGICAL an integer vector.

CD3:APC-A LOGICAL an integer vector.

CD4+CD20:PB-A LOGICAL an integer vector.

CD45:PO-A LOGICAL an integer vector.

CD56+IgK:PE-A LOGICAL an integer vector.

CD5:PerCP Cy5-5-A LOGICAL an integer vector.

CD8+IgL:FITC-A LOGICAL an integer vector.

FSC-A LINEAR an integer vector.

SSC-A Exp-SSC Low an integer vector.

Population ID (name) an vector of cell types (strings).

### Source

### Examples

```
data(Cytometry1)
head(Cytometry1)
```

---

*Cytometry10**Cytometry10*

---

**Description**

A simulated flow cytometry dataset, as a data frame, of a healthy individual based on data taken following Euroflow protocols.

**Usage**

```
data("Cytometry10")
```

**Format**

A data frame with 100000 observations on the following 11 variables.

CD19/TCRgd:PE Cy7-A LOGICAL an integer vector.

CD38:APC H7-A LOGICAL an integer vector.

CD3:APC-A LOGICAL an integer vector.

CD4+CD20:PB-A LOGICAL an integer vector.

CD45:PO-A LOGICAL an integer vector.

CD56+IgK:PE-A LOGICAL an integer vector.

CD5:PerCP Cy5-5-A LOGICAL an integer vector.

CD8+IgL:FITC-A LOGICAL an integer vector.

FSC-A LINEAR an integer vector.

SSC-A Exp-SSC Low an integer vector.

Population ID (name) a vector of cell types (strings)

**Examples**

```
data(Cytometry10)
head(Cytometry10)
```

---

Cytometry11

*Cytometry11*

---

### Description

A simulated flow cytometry dataset, as a data frame, of a healthy individual based on data taken following Euroflow protocols.

### Usage

```
data("Cytometry11")
```

### Format

A data frame with 100000 observations on the following 11 variables.

CD19/TCRgd:PE Cy7-A LOGICAL an integer vector.

CD38:APC H7-A LOGICAL an integer vector.

CD3:APC-A LOGICAL an integer vector.

CD4+CD20:PB-A LOGICAL an integer vector.

CD45:PO-A LOGICAL an integer vector.

CD56+IgK:PE-A LOGICAL an integer vector.

CD5:PerCP Cy5-5-A LOGICAL an integer vector.

CD8+IgL:FITC-A LOGICAL an integer vector.

FSC-A LINEAR an integer vector.

SSC-A Exp-SSC Low an integer vector.

Population ID (name) a vector of cell types (strings)

**Description**

A simulated flow cytometry dataset, as a data frame, of an individual with a Mantle Cell Lymphoma based on data taken following Euroflow protocols.

**Usage**

```
data("Cytometry25")
```

**Format**

A data frame with 100000 observations on the following 11 variables.

CD19/TCRgd:PE Cy7-A LOGICAL an integer vector.

CD38:APC H7-A LOGICAL an integer vector.

CD3:APC-A LOGICAL an integer vector.

CD4+CD20:PB-A LOGICAL an integer vector.

CD45:PO-A LOGICAL an integer vector.

CD56:IgK:PE-A LOGICAL an integer vector.

CD5:PerCP Cy5-5-A LOGICAL an integer vector.

CD8:IgL:FITC-A LOGICAL an integer vector.

FSC-A LINEAR an integer vector.

SSC-A Exp-SSC Low an integer vector.

Population ID (name) a vector of cell types (strings)

A data frame with 50000 observations on the following 11 variables.

CD19/TCRgd:PE Cy7-A LOGICAL an integer vector.

CD38:APC H7-A LOGICAL an integer vector.

CD3:APC-A LOGICAL an integer vector.

CD4+CD20:PB-A LOGICAL an integer vector.

CD45:PO-A LOGICAL an integer vector.

CD56+IgK:PE-A LOGICAL an integer vector.

CD5:PerCP Cy5-5-A LOGICAL an integer vector.

CD8+IgL:FITC-A LOGICAL an integer vector.

FSC-A LINEAR an integer vector.

SSC-A Exp-SSC Low an integer vector.

Population ID (name) a vector of cell types (strings)

### Source

E del Barrio, H Inouzhe, JM Loubes, C Matran and A Mayo-Isar. (2019) optimalFlow: Optimal-transport approach to flow cytometry gating and population matching. [arXiv:1907.08006](https://arxiv.org/abs/1907.08006)

### Examples

```
data(Cytometry8)
head(Cytometry8)
```

---

Cytometry9

*Cytometry9*

---

### Description

A simulated flow cytometry dataset, as a data frame, of a healthy individual based on data taken following Euroflow protocols.

### Usage

```
data("Cytometry9")
```

### Format

A data frame with 100000 observations on the following 11 variables.

CD19/TCRgd:PE Cy7-A LOGICAL an integer vector.

CD38:APC H7-A LOGICAL an integer vector.

CD3:APC-A LOGICAL an integer vector.

CD4+CD20:PB-A LOGICAL an integer vector.

CD45:PO-A LOGICAL an integer vector.

CD56+IgK:PE-A LOGICAL an integer vector.

CD5:PerCP Cy5-5-A LOGICAL an integer vector.

CD8+IgL:FITC-A LOGICAL an integer vector.

FSC-A LINEAR an integer vector.

SSC-A Exp-SSC Low an integer vector.

Population ID (name) a vector of cell types (strings)

### Examples

```
data(Cytometry9)
head(Cytometry9)
```

---

|                          |                    |
|--------------------------|--------------------|
| <code>noise.types</code> | <i>noise.types</i> |
|--------------------------|--------------------|

---

**Description**

A list of cells that can be considered as noise (Debris and Doublets).

**Usage**

```
data("noise_types")
```

**Format**

A list 38 cell types that can be viewd as noise.

**Examples**

```
data(noise.types)
print(noise.types)
```
