

File

```
graph TD; File --> DiskFile; File --> MemoryFile;
```

The diagram illustrates a class hierarchy. At the top is a yellow rounded rectangle labeled 'File'. Two black arrows point downwards from the bottom of the 'File' box to two separate yellow rounded rectangles below it. The left box is labeled 'DiskFile' and the right box is labeled 'MemoryFile'. This indicates that 'File' is a base class or abstract class, and 'DiskFile' and 'MemoryFile' are its subclasses or concrete implementations.

DiskFile

MemoryFile
